

HULFT Data Integration For Automotive Suppliers

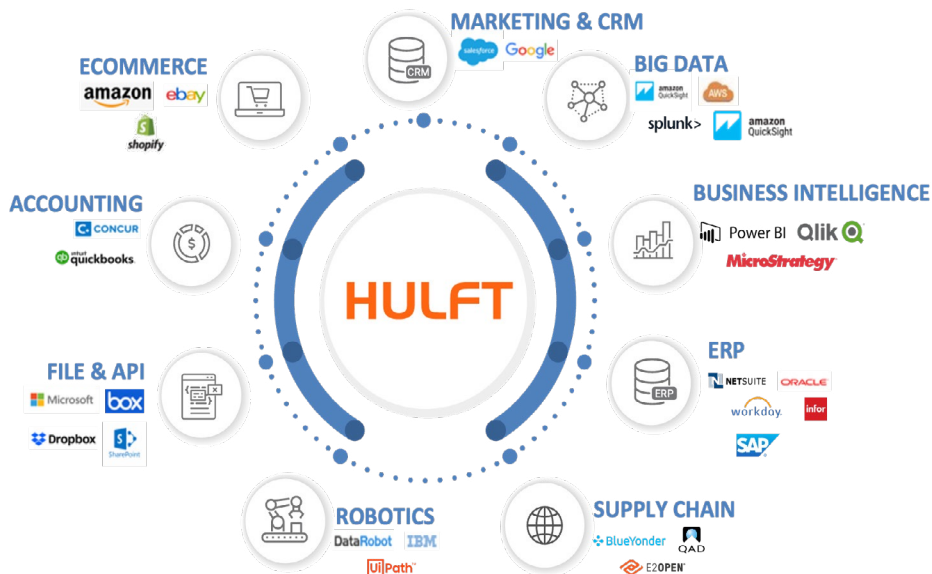

Automotive suppliers are experiencing unprecedented change. The top business matters for CEOs of Tier 2 and 3 auto suppliers involve navigating a complex landscape marked by several key challenges, including the need to fundamentally restructure the automotive supply chain.

Companies have been severely tested by recent global events, leading to shortages of key components and materials. CEOs must navigate these challenges through strategic planning and by fostering stronger relationships with both OEMs and lower-tier suppliers to ensure continuity and manage costs effectively.

No matter the business issue, companies have an unending need for faster access to better information, as near to real-time as possible. Automotive business leaders realize the value of data and what it means to be data-driven. But the question is: How?

Saison Technology: Helping the Automotive Industry Compete with Faster, Richer Data

We offer one platform with a complete set of products, solutions and managed services to connect business applications and databases, legacy systems and manufacturing environments.

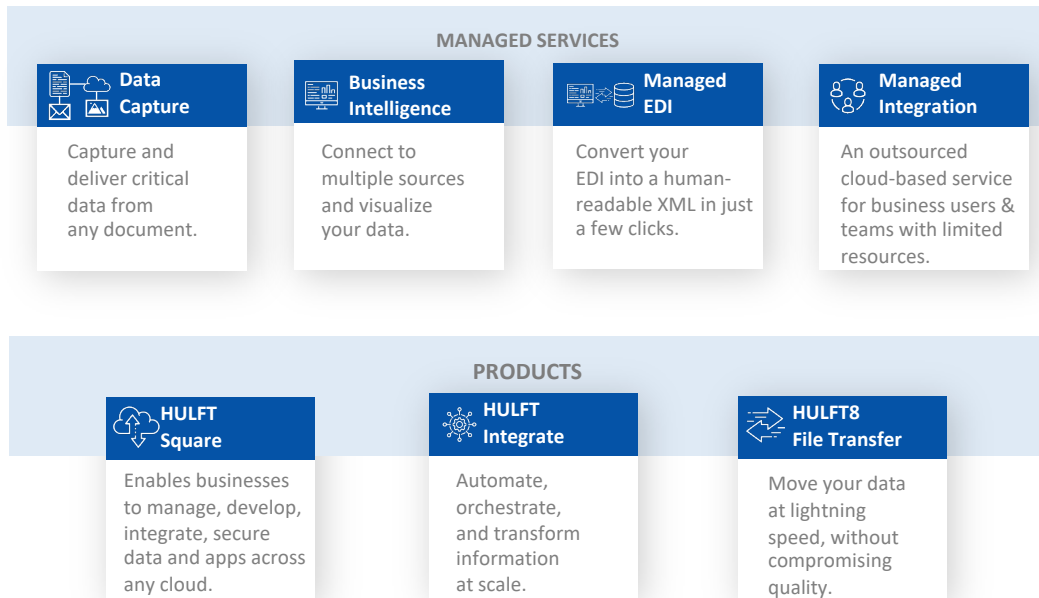

Saison Technology Connects Everything With HULFT Data Integration

Imagine replacing what used to take months and thousands of lines of code with a low-code workflow that moves as fast as your business. And imagine creating a powerful, comprehensive, high-speed data integration architecture that is compatible with all your major data platforms through a simple, intuitive visual interface.

In many cases, our customers do not have the staff or the budget to manage all their integration projects, but they have urgent needs such as improving a business process or boosting topline revenue. For these use cases and hundreds more, HULFT can address all your data integration needs by leveraging a single modern platform with complete enterprise security.

HULFT

Integration Platform

What Makes Us Different

01

Any system, legacy or modern

02

Deep specialty in manufacturing, supply chain, distribution and process industries

03

One of the only integration vendors offering on-premise, SaaS and managed services

The Saison Technology Difference: Immediate results and a platform for the future.

Your business cannot wait two or more years for results. Business operations teams need applications today that integrate data sources and digitize documents that shorten process workflows and improve customer satisfaction. Just as important, your company must re-architect legacy platforms to prepare for IoT, and artificial intelligence. This is a completely different process on a different timeline, but just as essential to your mission. Only HULFT can give the best of both worlds.

Why Saison Technology?

Saison Technology Saison Technology (TSE:9640) is the company that helped Japanese and other Asian banks computerize their operations and conduct eBusiness. Today, we're the fuel you need for legacy data and digital transformation and IoT initiatives.
