HULFT Business Intelligence

One of The Fastest Ways to Operationalize Your Data and Create Unified Business Dashboards

Dashboards are only as good as the data behind them. Count on Saison Technology to deliver clean and fresh data from any source and create a visualization in as little as 30 days.

A Managed Service

The majority of Saison Technology's customers do not have the staff or the budget to manage a large-scale BI platform, but they have urgent requirements to better understand and measure the performance of their business. We unlock your essential data that meets IT and regulatory compliance and serve it up in the dashboard format that your business team requires.

Legacy Data? No Problem

BI data comes from everywhere, in a wide variety of formats. Whether your source is an old legacy system or an IoT sensor stream in a factory, our library of more than 600 business adapters can connect to practically any enterprise system or data source.

Leveraging Power BI and Tableau Front Ends

We use leading analytics UIs because most business users already have some experience with them, and most companies already have a license that enables them to use them immediately. This speeds up the time it takes to create the BI solution and reduces operational costs significantly.

Key Benefits of HULFT BI

Put an end to data cleansing and spend more time managing your operational performance.

Go from 30% to 100% data access with Saison Technology's enterprise-grade data integration capabilities.

A dashboard that evolves monthly through our change management service included in your subscription.

Extreme data security leveraging a proven enterprise architecture from Saison Technology.

Cost is a fraction of traditional BI that is made possible through a SaaS model and a company with an international scale.
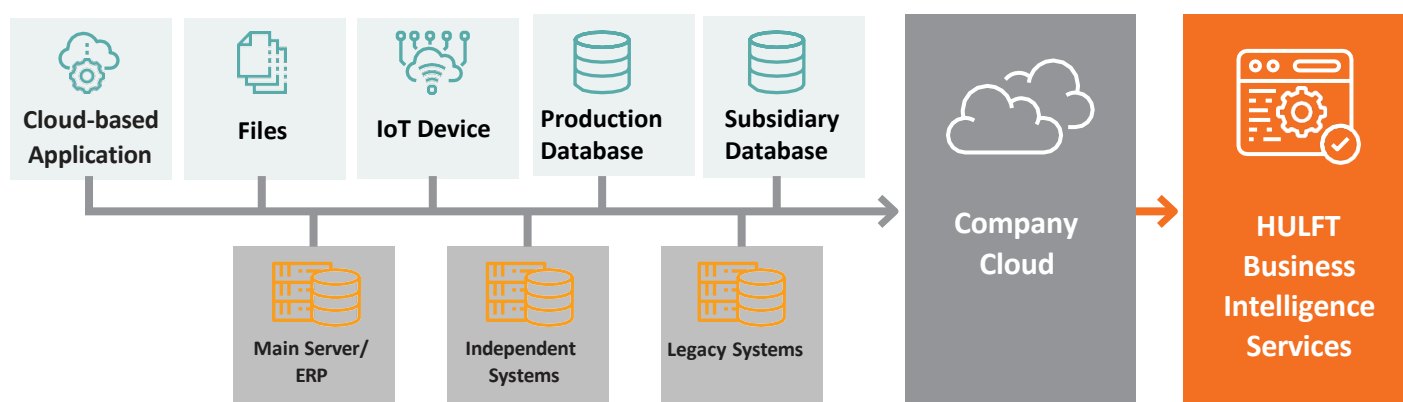

A Proven Data Integration Platform

Underneath the data visualization layer is the HULFT Data Integration Platform an automated, low-code data integration platform. Whereas most data extraction tools require significant manual interaction such as uploading the file, waiting for results, downloading the data, and then manipulating it to the right format, we connect that data to any internal or external database directly.
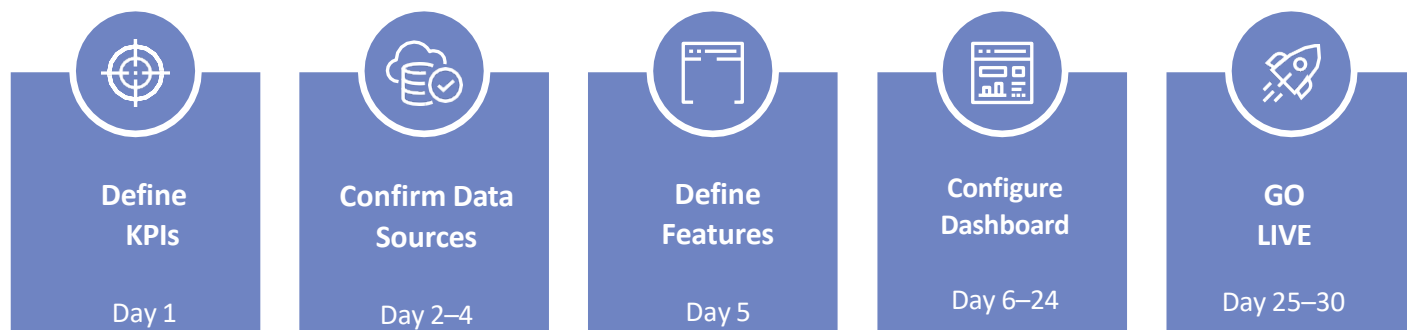

With over 10,000 customers spanning finance, supply chain and manufacturing sectors across 40+ countries, Saison Technology is one of the most trusted and widely adopted data logistics solutions on the market today.

BI Architecture

Cloud-based Application | Files | IoT Device | Production Database | Subsidiary Database → Company Cloud → HULFT Business Intelligence Services

Main Server/ERP | Independent Systems | Legacy Systems

Our Onboarding Process

Define KPIs	Confirm Data Sources	Define Features	Configure Dashboard	GO LIVE
Day 1	Day 2–4	Day 5	Day 6–24	Day 25–30
