

HULFT Square

Connect SaaS applications, legacy and on-premise systems to a public cloud

Data transformation initiatives and public cloud adoption continue at a rapid pace. But the reality for most companies is that they have significant legacy assets and on-premise applications to integrate with the cloud. Consequently, having flexible, enterprise-grade data integration options are critical to maintaining operational agility.

With three decades of data integration experience and more than 10,000 global customers served, Saison Technology provides customers with future-proof options that address current and future needs. HULFT Square is our 5th-generation solution that complements a broad portfolio of cloud, on-premise and managed services options.

A modern integration solution built on AWS that uses intelligent recommendations to reduce the amount of human intervention required to connect your data.

Key Benefits of HULFT Square

Start small, scale fast. HULFT Square features streamlined API management and many automations that make first deployments simple and expanding them company-wide and to external partners more efficient than ever.

IT maintains control of complexity. No matter how complex your integration map or how large the data volumes, HULFT Square's user interface and intelligent workflows keep administrators organized and one step ahead of the organization.

Enterprise-grade security. Our modern cybersecurity framework enables you to protect every integration between systems, no matter where they are located or how old.

GDPR, CCPA and SOC 2 compliant. HULFT's data models enable your organization to expand deployments globally with confidence, knowing that machine data and customer information are protected in any country.

Count on HULFT to Connect Anything – SaaS, On-Premise or Legacy

Our typical customer has data located in the most modern SaaS applications and databases that are over 10 years old. Saison Technology provides connections to a wide variety of data stores and data providers whether local, on premises, or in the cloud. Data sources range from text files to Excel spreadsheets, databases, message queues, email servers, FTP servers, web services, cloud stores, applications and big data lakes.

TradeWaltz Leverages HULFT Square for Blockchain-Based Shipping and Trading Platform

When NTT Data created a next-generation platform initiative to improve the efficiency and security of global shipping in Asia, it chose HULFT as its trusted partner to provide a flexible data integration solution for dozens of global shippers, manufacturers and traders to connect their company systems with the TradeWaltz platform.

A Globally Proven Enterprise Platform and Managed Services for Ultimate Flexibility

For more than three decades and across over 10,000 customer deployments, Saison Technology operates one of the most proven enterprise data integration platforms in the world. We were among the first middleware and MFT providers, and have since led our customers through each evolution of data integration.

In addition to on-premise, private- and public cloud deployments, Saison Technology now offers managed services hosted in AWS for customers who do not have the budget or the internal expertise to manage integration projects. Let us provide an option that is right for you.

HULFT Cloud Solutions are Hosted in AWS
