

## HULFT Rapid Connector Development

Custom-built solutions to connect essential legacy or ultra-modern systems, on-premise and SaaS in 90 days or less

Over the past three decades, HULFT has created the largest library of connectors in the industry that can be used to customize business dashboards. And because no company's IT footprint or business processes are the same, we are constantly building custom connectors to support our customers' digital transformation.

Connect mainframes to AI? ERP to deeply verticalized industry systems? Back office to public cloud? Business intelligence tools to modern SaaS and legacy data stores? Fill the integration gaps standard ETL tools still don't solve? We've got you covered.

While many integration companies support popular platform integrations for the Fortune 1000, HULFT's specialty is the hard cases. And the rare cases. For companies of all sizes. Because we are keenly motivated to help our customers address their total integration needs and be as productive as possible.

### A Dedicated Team that Moves Fast

HULFT works with your business goals in mind and applies our automation capabilities towards rapid code creation, dependency injection, automated testing and domain-driven design. Using an agile development approach, we typically complete a custom connector project within 6-12 weeks.

In the final stage of the process, HULFT uses quality assurance best practices to ensure the new connector has automated error correction, automated function testing, security, and all proper methodologies for any back-office and ecommerce platforms, specific industry automation systems, Robotic Automation Systems (RAS), Manufacturing Execution Systems (MES), Warehouse Management Systems (WMS), Transportation Management Systems (TMS), Customer Relationship Management Systems (CRMS) or other platforms as needed.

### Rapid Development Process

Investigate the software for APIs that are processed through HULFT's automation (WSDL, XSD, Swagger, Postman collections, or GraphQL schemas)

Work with automation documentation, collect all supporting materials and dependencies (Maven and Gradle)

Known applications are used to automatically build-out as much of the appropriate software or stubs as possible before developers begin the effort

HULFT's developer staff fills in the business logic

Work 1:1 with customers to automate data that contributes to KPIs

Quality Assurance

## Common Results for Uncommon Connectors

---

HULFT custom connectors deliver value across many business dimensions. Our affordable cost model and rapid development process means you won't wait very long to deploy the connections and start seeing results such as:

- Removing data silos that are costing you money, productivity and opportunity.
- Integrating your legacy systems with a common, modern data framework.
- Replacing manual, unrepeatable processes with process automation.
- Integrating your business and tech teams, achieving an exponentially higher level of collaboration.
- Establishing a higher level of enterprise security and clear data lineage.
- Putting data and analytics in the hands of all your employees.

- Wave

## Get Started Today

---

HULFT has hundreds of connectors in the library today, and our team is currently working on a group of specific ERP systems for the plastics, mining, and manufacturing industries. For robotics and cutting tool manufacturers we are integrating core enterprise systems with specialized industry data stores to visualize their KPIs on new dashboards, in real time.

What can we build for you today? Give us a call.
